

Install 3rd Party Repositories & Addons Kodi 17 (Kypton)

KodiGuide.Info

Allow 3rd party addon's to be installed

This only needs to be done once.

1. Kodi Home Screen -- > **System** (Gear Icon top Left) --> **System Settings** --> **Addons**
2. Make sure to turn on **Unknown Sources**
3. There will be a warning pop up press **Yes**

Add the repository address to Kodi

1. Kodi Home Screen --> **System** (Gear Icon top Left) --> **File Manager**
2. Click on **Add Source**
3. Select **None** & this is where you will enter the repository address. So for example we will use the Xunity repository address "**http://xunitytalk.me/xfinity**". <-- Enter this without the quotes & press **Ok** when done
4. Next in the box at the bottom set a name for the repository. Example: **'Xunity'** and click **OK**

Install the 3rd party repository

1. Kodi Home Screen --> **Addons**
2. Click on the **Package Installer** (Top left. Looks like an opened box)
3. Choose **Install from Zip file** --> **Xunity** (Or whatever name you used for the repository)
4. Select **XunityTalk_Repository.zip** and install it

(Note: Each repository will have different file name. But usually they use the name of the repository so its easy to find the zip file you need)

5. Wait until you see the **add-on enabled notification pop up**

That's it. The repository is installed & setup.

Access the repository & to install addons

1. Kodi Homescreen --> **Addons** --> **Package Installer** (Top left. Looks like an opened box)
2. Now, select **Install from repository** --> **Repo Name (Example: Xunity)**

Now you will see the list of addons that the repository offers, & you can install what you need & it will be added to your Addons screen

Repeat the need steps above to add any repositories and/or addons you need. Enjoy !!!
